

Side-wall Conveyor Belt

These technically advanced side wall conveyor belts ensure fast and safe movement of powdery and lumpy material even in bulk quantity. The belts are manufactured using high quality raw materials and thus are able to work in extreme temperatures as well as do not buckle under compression. Widely used in various industrial applications, these conveyor belts are offered at competitive rates.

Features :

- used at steeper angles up to 75 degree
- Ideal for transporting powdery and lumpy materials
- transport high volumes without any spillage
- Are adequately rigidity
- Do not buckle under compression
- Tear and gauging resistance
- Enhanced durability
- low maintenance cost

Application :

Sidewall belt conveyor is widely used in
Ceramic Industry
Construction industry
Port
Metallurgy
Mining
Electricity
coal
casting
building materials
food
Agriculture
Recycling Industry
chemical industry material conveying.
